

Display security for tablets

Focus on product

Our display security systems always offer discreet and optimal protection for all types of product, in every exhibition layout where the customer's attention is always focused on the product, with the possibility of being able to freely use it, verify it's functionality and ergonomics.

Security

It's the main aspect that characterizes our systems.

The automatic activation of the protection and the memory of an alarm event to facilitate the store personnel , reducing the necessary interventions in the usual management operations and frustrate the escamotages routinely used to circumvent protections.

This modularity allows the customization of protection from individual product to vast exhibition space , with the certainty of a security always adequate to your needs.

Powering

In addition to security , our systems allow for the correct powering of products , even during times of peak usage , offering customers a unique shopping experience that increases the impulse in purchasing the desired object.

Store friendly

The simplicity of installation and management easier commissioning and maintenance.

The modularity of the sensors allows maximum versatility according to the display requirements .

From our production lines directly to your store , no intermediate steps and additional costs.

Display security for tablets
